Koushik Gadey

koushikgadey@gmail.com 7396969636

Summary:

Quality Assurance Engineer with 4.3 years of experience in software testing, specializing in functional and regression testing. Skilled in test automation using Python and Selenium, with hands-on expertise in VMware virtualization, storage protocols, and Agile methodologies. Adept at developing, executing, and managing test cases to ensure high-quality deliverables.

Tech Stack:

- Testing: ***Functional & Regression***
- Programming Language: ***Python***
- Frameworks & Tools: ***Selenium, Pytest, REST Assured (for APIs)***
- Operating Systems: ***Windows Server 2022, RHEL 8, ESXI 8.0, Ubuntu 22***
- IDEs/Editors: ***VS Code, PyCharm, Eclipse***
- Version Control: ***Git***
- Databases: ***MySQL***
- Storage Domain: ***DAS, SAN, NAS, RAID, Backup & Replication***
- Methodologies: Agile (***Scrum), SDLC, STLC***

Professional Experience:

- ***Quality Assurance Engineer*** at **Calsoft (India) Private Limited.**
  Jul 2021 – Present

1. **SANMINA CERTIFICATION**

Description - Sanmina Certification, a hardware firm, we used to certify the servers using VMware and RHEL tools. We would run the tests according to the test plan and provide the logs and results to Redhat Enterprise and VMware and NVIDIA gpu cards.

Roles and Responsibilities -

- ➔ Conducted certification testing for enterprise servers using **VMware** and **Red Hat Enterprise Linux (RHEL)** tools, ensuring compliance with industry standards.
- ➔ Executed test cases based on detailed **test plans**, validating system performance, compatibility, and functionality.
- ➔ Collected, analyzed, and documented test results and logs, providing comprehensive reports to **Red Hat Enterprise (RHEL), VMware, and NVIDIA** for validation..
- ➔ Maintained detailed test documentation, ensuring traceability and compliance with certification requirements.
- ➔ Assisted in automating test procedures to improve efficiency and accuracy in the certification process.

2. **Veritas_ISM On Prem**

Description - NetBackup supports protection of various NAS, SAN storage arrays like NetApp, Isilon, Hitachi, EMC Unity, EMC PowerMax, Pure Storage etc. For this we have infrastructure code which is generic and we have array specific code (referred as plug-in code) which is specific to respective arrays. We are looking to enhance this plug-in code to build support for

1. Multi Volume/Consistency group/Volume group. (All these terms mean the same but different array vendors use different terms).
2. Snapshot based Replication

3. Generic Test utility

Roles and Responsibilities -

- ➔ Conducted **functional and regression testing** of NetBackup's NAS and SAN storage protection across multiple arrays, including NetApp, Isilon, Hitachi, EMC Unity, EMC PowerMax, and Pure Storage.
- ➔ Developed and executed **automation scripts** using **Python, Selenium, PyTest** to validate storage integration workflows.
- ➔ Validated and enhanced plug-in code for different storage arrays to support **Multi-Volume, Consistency Group, and Volume Group** operations, ensuring seamless backup and recovery.
- ➔ Performed extensive testing on snapshot-based replication to verify **data integrity, failover handling, and recovery performance.**
- ➔ Designed, documented, and executed test plans and test cases in alignment with **SDLC/STLC practices and Agile Scrum methodology.**
- ➔ Performed **REST API testing** to validate backup, replication, and recovery endpoints for storage workflows.
- ➔ Identified and reported defects, collaborated with developers to troubleshoot complex issues, and ensured timely resolution.
- ➔ Analyzed **system logs and performance metrics** to assess backup efficiency, replication reliability, and storage compatibility.

- ***Quality Assurance Engineer*** at **Xoriant Solutions.**
  Feb 2021 – Jul 2021

1. **Veritas Flex Appliance**

Description - Veritas Flex Appliance is a customizable data management solution consolidating multiple applications on a single hardware platform. With Flex Appliance, you can run concurrent instances of the following storage options: MSDP, Advanced Disk, Lockdown mode, and Recovering storage data. Responsibilities: Testbed preparation based on the test requirements Configuring the testbed Executing test cases Raising the bugs Monitoring the bugs closely Sending weekly reports and execution status. Writing tests for new changes in functionalities.

Roles and Responsibilities -

- ➔ **Testbed Preparation & Configuration** – Set up and configure **test environments** based on specific test requirements to validate Flex Appliance functionalities.
- ➔ **Functional & Regression Testing** – Executed test cases to verify **MSDP, Advanced Disk, Lockdown Mode, and Recovery Storage Data** features, ensuring stability and performance.
- ➔ **Defect Tracking & Reporting** – Identified, reported, and monitored defects using bug-tracking tools, collaborating closely with development teams for resolution.
- ➔ **Test Automation & Documentation** – Developed and maintained test scripts using python for new feature enhancements, ensuring efficient validation of functionalities.
- ➔ **Performance & Scalability Testing** – Validated the appliance's ability to handle concurrent **storage operations**, ensuring optimal resource utilization and system resilience.

Core Competencies:

- Problem-solving skills
- Rapid and continuous learning abilities
- Adaptability to changing circumstances
- Self-motivated
- Effective teamwork and collaboration
- Efficient time management

Education:

- Graduated with a BTech in Computer Science, Sir M. Visvesvaraya Institute of Technology.
