SUMMARY

- **With 3+ Years of experience** in Information Technology with Software Quality Assurance Testing of Web based applications in **Manual Testing, Automation testing** using **Selenium with Java** and **API Testing** using **Postman.**
- **With 2+ years of experience in automation testing**, I have hands-on expertise in building scalable and maintainable test automation frameworks from scratch using **Selenium**, **Java and BDD Cucumber Framework integrated with TestNG** and other tools.
- Experience in **Mobile Testing** for both **Android** and **iOS** Devices. Worked on **SaaS Applications, Banking domain and E-commerce domain**.
- Experience working with various frameworks such as **Data Driven, Hybrid** Framework and **Cucumber BDD.**
- Experience in automating web applications using **Java, Selenium Web Driver, TestNG, Maven, Jenkins** tools.
- Experience in **Database Testing** using **SQL Server.**
- Exploring **AI** and **Prompt Engineering** for **Testing**
- Strong Experience in writing **XPath** for dynamic web elements.
- Experience in creating reusable function libraries and utilities in automation frameworks.
- Good experience in **HTML** reports generation using the **TestNG Reports** and **Extent Reports.**
- Experience in reviewing automated test scripts and modifying them according to the business functionality
- Experience in creating **BDD test framework** using **Gherkin language** and developing scripts with **cucumber,** including Feature files, step definitions and Test Runner files.
- Experience with build management tools such as **Maven** and **Version Control** tools like **GitHub.**
- Strong experience in executing **SQL** queries to validate backend data as part of **Database Testing**.
- Hands-on experience with the **defect tracking** tool **Jira**.

PROFESSIONAL EXPERIENCE

- **QA Engineer** at **Travash Software Private Limited**, **Hyderabad, India**
  From **December, 2024** to **Nov 2025**.
- **QA Engineer** at **Bento Labs Private Limited**, **Hyderabad, India** from **July 2024 to Dec 2024.**

- **Software Test Engineer** at **Quikon Finserve Private Limited**, **Hyderabad, India**
  From **March 2022 to Jan 2024**.

EDUCATIONAL QUALIFICATION

- Completed **Bachelor of Technology (B.Tech)** in **ECE** from **Sree Datta Engineering Collage, India**.

TECHNICAL SKILLS

Languages	**Java**
Testing Tools	**Selenium, Cucumber(BDD), TestNG, Postman, SQL server and JIRA**
Web Technologies	**Html, XML, JavaScript**
IDEs	**Eclipse, IntelliJ ide**
Operating Systems	**Windows, Linux**

PROJECT EXPERIENCE

PROJECT-1:

Project Name: EGO GENSIS

Designation: Automation Test Engineer

Technologies: Java, Selenium Web Driver, TestNG, Cucumber,

SQL

Description:

This project focuses on recycling of IT devices and managing them for reuse in new products. We work with multiple clients, and for each client, we create a dedicated pipeline that handles their specific workflow. Within each pipeline, products can be added and processed through various stages — from collection and recycling to refurbishment and storage for new products.

Responsibilities:

- Understood the requirements to be tested and created test Scenario's, test data and test cases accordingly for Functional and Service Testing.
- Performed Smoke, Sanity, Re-Test and Regression testing whenever new changes were deployed to the environment.
- Conducted Functional and Regression testing done manually and retesting of logged defects while functional and service test execution.
- Identified defects/bugs and communicated them to the developers after test execution and provided support for defect reproduction.
- Designed and developed a robust automation testing framework from scratch using **Selenium**, **Java**, **TestNG**, and **Maven** following the **Page Object Model (POM)** design pattern.
- Integrated the framework with **Extent Reports** for reporting and **Log4j** for logging.
- Involved in creating Feature files, Step definitions, and Runner class, TestNG.xml and incorporated the new changes into the framework. Analyzed step by step failures and pass criteria.
- Identified reusable functionalities and developed scripts developed for reusable scenarios.
- Updated automation test scripts for enhancements and maintenance of the application.

2.Project Name: GEMBA

Designation: Automation Test Engineer

Technologies: Java, Selenium WebDriver, Cucumber, TestNG and Postman, SQL

Description:

This project aimed to apply Gemba concepts to identify inefficiencies and improve operational workflows. By conducting Gemba walks and directly observing real work environments, the team analyzed existing processes, identified root causes of delays, and implemented continuous improvement (Kaizen) strategies. As a result, productivity increased, errors were reduced, and overall process quality improved.

Responsibilities:

- Participated in Business Analysis and Review meetings to understand the business, requirements and system functionality for designing test scenarios.
- Prepared detailed manual and automated test scripts, test scenarios, and test cases based on business logic.
- Collaborated with the team to discuss discrepancies identified during test case development and functional testing.
- Designed and developed a robust automation framework from scratch using **Selenium**, **Java**, **TestNG**, and **Maven, Page Object Model (POM)** design pattern.
- Integrated the framework with **Extent Reports** and **Log4j**.
- Automated test cases using BDD framework with Cucumber and Selenium in the Maven build tool.
- Performed manual testing to verify and validate that the product meets user requirements.
- Developed test scripts using Java and executed them through Selenium WebDriver.
- Performed **BDD using Cucumber Features, Scenarios and Step Definitions in Gherkin format**.
