INTERNSHIPS AND PROJECTS

Internships	**Teachnook** (Duration April 2024 - June 2024)
Projects	**Real Time Lane Detection using YOLO V5** This project implements a real-time lane detection system using the YOLOv5 (You Only Look Once version 5) object detection model. The system is designed to accurately detect and track lane lines from live video input or dashcam footage, enabling potential applications in autonomous driving and advanced driver-assistance systems (ADAS).
	Disease Prediction using ML This project aims to develop a machine learning model that predicts potential diseases based on user-input symptoms. By leveraging supervised learning algorithms, the model can classify diseases from a predefined set using patterns learned from a symptom-disease dataset. The system enhances early diagnosis and assists users in identifying possible health issues before consulting a medical professional.
