B.SAI KUMAR

Targeting a challenging role in Data Science to apply advanced analytics, machine learning, and AI techniques in solving real-world business problems and driving strategic outcomes. Aiming to contribute to organizational growth by transforming data into actionable insights that enhance efficiency, innovation, and decision-making processes.

bavandla.sk1996@gmail.com

+91 - 8919648276

Profile Summary

- **Data Scientist with 5 Years of Experience** in developing and deploying AI/ML solutions across multiple domains, with strong problem-solving, communication, and team collaboration skills.
- Proficient in **Machine Learning and Deep Learning** techniques, including ANN, CNN, RNN, LSTM, and advanced architectures for building robust predictive models.
- Expertise in **Natural Language Processing (NLP)**, including Named Entity Recognition (NER), text classification, multi-label classification, word embeddings, and conversational AI.
- Hands-on experience with **Large Language Models (LLMs)** and **Generative AI**, such as GPT-4, BERT, and Transformers, applied in chatbot development and content generation.
- Proficient in **Python programming** and core data science libraries: NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, PyTorch, and TensorFlow.
- Built and deployed **interactive AI applications** using tools like Streamlit for UI development and Azure ML/OpenAI for scalable cloud-based solutions.
- Familiar with **AI orchestration frameworks** such as Langchain, LangGraph, LlamaIndex, and prompt engineering techniques for enhancing model performance.
- Skilled in implementing a variety of **ML algorithms**: linear/logistic regression, decision trees, SVM, KNN, Naive Bayes, ensemble methods (Random Forest, XGBoost), and clustering (K-means).
- Involved in **client demonstrations, knowledge transfers, and technical presentations**, showcasing AI solution capabilities and business value.
- Strong understanding of **end-to-end AI solution development**, from data preprocessing and model training to deployment, monitoring, and continuous improvement.

Education

- BSC in Computers from Nizam degree college (Osmania University)2013-16, Hyderabad, India.
- PGDBM from Manipal University(2019-20)

Technical Skills

- **Programming Languages:** Python, SQL
- **Libraries & Frameworks:** NumPy, Pandas, Matplotlib, Seaborn, Sklearn, PyTorch, TensorFlow, NLTK, OpenCV
- **Machine Learning:** Linear Regression, Logistic Regression, Decision Tree, Random Forest, Naive Bayes, SVM, KNN, Boosting Algorithms, K-means, DBSCAN
- **Deep Learning**: ANN, CNN, RNN, LSTM, Advanced CNN, Advanced RNN
- **NLP Techniques**: Text Mining, Text Processing, Multi Label Classification, Named Entity Recognition (NER), Word Embedding
- **Generative AI & LLMs**: GPT-4, BERT, Transformers, RAG, Langchain, Langgraph, Llama Index
- **AI Tools & Platforms:** Azure ML, Azure OpenAI Services
- **Version Control & IDEs**: Spyder, iPython (Anaconda)
- **Cloud Platforms:** Azure, AWS and GCP verrtex

Area of Excellence

- AI Solution Architecture & Design
- Predictive Modelling
- Generative AI & LLM Integration
- Model Development & Evaluation
- Data Visualization & Analysis
- Cloud-based AI Deployment
- Deep Learning & Neural Networks
- Natural Language Processing (NLP)
- Performance Tuning & Optimization
- Cross-functional Collaboration

Soft Skills

- Change Agent
- Team Player
- Analytical
- Collaborator
- Communicator
- Planner

Work Experience

Axtria India Private Ltd | Data Science(Project-Lead) | Sept_25 -Still

Responsibilities:

- Spearheaded and supported the development of a data-driven early adopter identification framework to predict healthcare professionals (HCPs) likely to adopt newly launched oncology therapies.
- Collaborated closely with cross-functional stakeholders to understand business objectives, translate them into analytical requirements, and align model outputs with commercial strategy.
- Collected, cleaned, and integrated multi-source physician-level data including prescription behavior, engagement activity, speaker programs, and affiliations.
- Engineered and validated features capturing adoption behavior and engagement patterns across multiple time windows.
- Built and evaluated predictive models using Logistic Regression, Random Forest, XGBoost, and Ensemble approaches, focusing on precision, recall, and business trade-offs.
- Analyzed model outputs to explain differences in adopter coverage, false negatives, and targeting impact to both technical and non-technical stakeholders.
- Tuned model thresholds and evaluated performance to balance missed adopters versus field force workload.
- Actively participated in model review discussions, helping translate analytical results into actionable adoption scores and priority segments
- Supported timely delivery of project milestones in a lean, high-pressure ad-hoc project environment.
- Prepared documentation and analysis summaries to communicate progress, insights, and recommendations to project leadership.

COGNIZANT| Data Scientist Engineer| May_22 to July_25

Responsibilities:

- Developed and implemented advanced computer vision algorithms using OpenCV to detect and analyze solar panels, contributing to the optimization of solar power plant operations.
- Engaged in extensive image processing tasks, including annotating images with the Label ME tool, to enhance the accuracy of machine learning models.
- Executed predictive modeling techniques, focusing on performance tuning and model evaluation, to ensure the effectiveness of deep learning applications in solar energy analytics.
- Collaborated with project teams to gather and analyze requirements, ensuring that technical solutions aligned with business goals and user expectations.
- Conducted presentations to communicate project developments and findings to stakeholders, facilitating informed decision-making and strategic planning.
- Maintained daily updates on project tasks and progress, ensuring transparency and accountability within the team.
- Utilized Python IDEs such as Spyder and iPython to develop and test code, ensuring high-quality software development

ICICI BANK LTD| DATA ANALYST| NOV_20 to MAY_22

Responsibilities

- Conducted data analysis and predictive modeling to enhance customer experience and operational efficiency.
- Developed machine learning models to predict customer behavior and improve decision-making processes.
- Implemented text analytics techniques to analyze customer feedback and identify trends for service improvement.
- Collaborated with cross-functional teams to gather requirements and deliver data-driven solutions aligned with business objectives.
- Presented insights and recommendations to stakeholders, supporting strategic planning and execution.
- Ensured timely delivery of project milestones and maintained detailed documentation for project transparency.

Projects Undertaken

- **Early Adopter's Analysis to capture a market before a pre-approval of a drug**
  Domain: Pharma / Health care Analytics
  Technologies: Python,SQL, Pandas, Num-py, Scikit-Learn, Machine Learning
  Languages: Python, SQL
  Duration: Oct_25- Dec_25
  Description: Performed Early adopter analysis to identify and segment pharma users most likely to adopt the DB-09 solutions. Conducted EDA and Feature Engineering on clinical, Operational, and usage to uncover adoption Patterns. Built machine learning models to predict adoption likelihood and key drivers. Delivered actionable insights to support product rollout and adoption strategy.

- **AI-Powered Chatbot 4.0 for Smart Query Handling**
  Domain: Banking
  Technologies: Scikit-learn, TensorFlow/ PyTorch, Pandas & Num-Py
  Language: Python
  Duration: Sep_23- Aug_24
  Description: To design and implement a chat-bot capable of understanding user queries, processing natural language, and responding intelligently using data science techniques like Natural Language Processing (NLP) and ML
  Libraries/Frameworks:NLP- NLTK, spaCy, Transformers (HuggingFace)
- **AI Implementation for Solar Power Plant, Text Analytics & Customer Churn Modeling**
  Domain: Energy & Telecom | Technologies: Deep Learning (CNN, Predictive Modeling), Computer Vision
  Languages: Python, SQL
  Duration: Oct_24-Apr_25
  Description: Delivered AI solutions including solar panel detection using OpenCV, image annotation using LabelME, churn prediction models, and performance tuning. Focused on deep learning applications, text analytics, and customer behavioral modeling.
